Employee Directory 365

SW Machines streamlines employee information management with Employee Directory 365

SW Machines manages a large workforce and requires an efficient way to organize and access employee information across the organization. With **1,600 users**, having employee details readily accessible and easy to filter is important for helping employees find the right information quickly.

To support its employee directory requirements, SW Machines selected **Employee Directory 365** on the **Enterprise plan.**

The organization uses multiple filters to make employee information easier to find and leverages live synchronization of employee images from Azure, helping keep directory information aligned with its existing environment.

Customer: SW Machines
Website: https://www.sw-machines.com/
Customer size: 1,600 Employee
Country: Germany
Industry: Machinery Manufacturing
Services: Industrial Automation Solutions

1,600 Users

Enterprise Deployment

Employee Directory 365 supports a large-scale deployment of 1,600 users across the organization.

Multiple Filters

Faster Employee Discovery

Multiple filtering options make it easier for users to narrow down employee information and find the right people.

Live Azure Image Sync

Up-to-Date Employee Profiles

Live synchronization of images from Azure helps keep employee profile information current within the directory.

Challenges

With a large employee base, finding the right employee information can become more difficult when directory data is not easy to filter or navigate. Organizations also need employee information to remain current as details change across connected systems.

SW Machines required an employee directory that could support a large user base while providing flexible filtering options for easier employee discovery.

The organization also needed a way to keep employee images synchronized with its Azure environment rather than relying on separate manual updates.

Why Employee Directory 365 Was Selected

SW Machines selected Employee Directory 365 on the Enterprise plan to provide a structured and scalable employee directory for its 1,600 users.

The platform's filtering capabilities allow the organization to provide multiple ways to locate employee information, while live image synchronization from Azure helps maintain current employee profile images within the directory.

Key Features in Use

Employee Directory 365 provides SW Machines with capabilities to organize and access employee information across its workforce.

Key features in use include:

- Multiple employee filters
- Advanced employee information discovery
- Live image synchronization from Azure
- Centralized employee directory
- Enterprise-scale employee management

The combination of flexible filtering and Azure image synchronization helps SW Machines maintain an accessible and up-to-date employee directory.

Solution

Employee Directory 365 provides SW Machines with a centralized platform for displaying employee information across its 1,600-user environment.

Multiple filters allow employees to narrow down directory information and locate colleagues more efficiently. This is particularly useful in a large organization where users may need to search through a substantial number of employee records.

SW Machines also uses live synchronization of employee images from Azure, helping ensure that profile images displayed in the directory remain aligned with the organization's existing Azure data.

By combining flexible filtering with live Azure synchronization, Employee Directory 365 provides SW Machines with a more structured and manageable approach to employee directory management.

Client Says

"Employee Directory 365 gives us the flexibility to use multiple filters and keep employee images synchronized from Azure, making it easier to manage and maintain our employee directory."

-Stefan Holzer, SW Machines

Key Benefits to SW MACHINES

- Centralized employee information for a 1,600-user environment.
- Multiple filters for easier employee discovery.
- Live synchronization of employee images from Azure.
- Reduced manual effort in maintaining employee profile images.
- Scalable employee directory management through the Enterprise plan.
